1. Wide Range Available

The S3000 range includes an array of switch module options, allowing for a variety of product configurations. Sockets include TV, data, telephone, RCA sockets and the dedicated switch modules with selected icons for dedicated use. The S3000 range is also compatible with Clipsal's S2000 30-series mechanisms.

2. Clear Frames

The clear polycarbonate frames of the S3000 range simplify the lining up of fixing screws with wall box threads. The frames are available in various sizes and the 'teeth' ensure modules fit properly.

3. Flexibility

The unique nature of this range allows combinations of switches, socket outlets, audio and the TV in the same grid plate, providing you with greater options.

4. Interchangeable Coloured Surrounds

All S3000 products are available in white or black with 8 stunning colour surrounds in blue, champagne, charcoal, gunmetal grey, platinum, red, black and white. These interchangeable surrounds provide a limitless choice of colour combination to suit any interior.

5. Neon/Led Indicator

All S3000 sockets and switches can accommodate a Neon or LED lamp, inserted into the back of the product. The innovative design of the switches include a retainer with a light-diverting shield which is used to intensify the light and direct it to the front lens, minimising light loss through the sides of the switch.

This is a modular system with interchangeable surrounds and grid plates to suit all requirements, available from 1 to 6 lever switches. The unique clip-on surrounds hide mounting screws, which are easy to remove for painting. This range is manufactured from high gloss, impact resistant polycarbonate material and available in standard white, 4 moulded colours and 3 painted colours. Other accessories include TV and Data sockets, shaver and floor mounted sockets.

Introduced over 20 years ago, the LX range is still one of Clipsal's popular ranges. Commended for its strength and reliability this range consists of modules and cradles with a choice of cover plates available in either steel or polycarbonate. Also available in this range is 6A and 16A unswitched socket outlets, industrial switch sockets, isolators and combo units.

This range is available in  White (WE)

S2000 Universal Tactile Dimmers

Suitable to use with Leading and Trailing edge, Electronic or Wirewound Transformers. These dimmer modules also have built in short circuit and overload protection.

S2000 Rotary Dimmers

Rotary dimmers are suitable for use with incandescent lights and low voltage lights. Available in 7 colours complete with surrounds, these dimmers can also be used with wirewound transformers.

Tactile Dimmers

Designed for use with Clipsal's 30 series Touch Press Mechanisms. Tactile dimmers are suitable for use with incandescent and low voltage lights, and can be used with Electronic or Wirewound Transformers.

Scene Master

The Scene Master Lighting Controller is designed for places where frequent alternations of intensity and distribution of background lights are required to suit changing activities. Lighting creates different atmosphere in matching particular interior decoration and a multi-functional dimming switch therefore is essential in decoration.

A premium of 10% will be charged for all colours and are made to order 6-8 weeks lead time

The E3000 range offers a sleek and stylish design, with embedded LED backlights and features slim flush plate finishing, as well as horizontal switching operations. The LED technology replaces traditional neon indicators, and reduces the consumption of electrical power. The Hotel Range provides a unique range of purpose-designed switches specifically designed for the hospitality market. Available in white and silver grey and comes in standard 75mm x 75mm size.

The range offers solutions for under floor, under carpet and under tile heating. In addition to the range are our standard and electronic thermostats. The electronic thermostat is fully programmable with a built-in clock function for automatic comfort and setback temperature.

It features an electronic on/off control and can be mounted in bathrooms and other humid areas.

The Clipsal Titanium's range of structured cabling products have transformed conventional data communications product design. With sleek, contemporary looks and exceptional performance, the Clipsal Titanium range has already set a new benchmark for structured cabling products. The Titanium modular jacks represent the world's first flush faced, shuttered modular jack.

The range includes category 5e and Category 6 structured cabling products and is complemented by an extensive selection of allied products including Voice Solution, Flush Mounting Accessories and UTP Patch leads

Exclusive to the C-Bus Automation and Management System.

Includes ULTI-Saturn, crafted from pure glass, reflection, a stainless steel beauty, and the unique NEO range.

Switches can be programmed to control any electrical device connected to the C-Bus Automation System.

New Digital Labelling Technology range with ULTI-Saturn and NEO switches.

C-Bus Wireless products enable you to retrofit C-Bus enabled switches into an existing installation - perfect for renovations.

TOUCH SCREENS

Please note: Before C-Bus Touch Screens become functional units, they have to be programmed by a CSA Systems Intergrator or an Approved Installer with the appropriate accreditation, using the Windows compatible Touch Screen configuration software. The manufacturer's warranty will be void if this is not complied with. Please contact your C-Bus specialist for further details.

INFRA-RED OUTPUT UNITS

Please note: Before C-Bus Infra-red unit become functional units, they have to be programmed by a CSA Systems Integrator or an Approved Installer with the appropriate accreditation, using the Windows compatible Infra-red Unit configuration software. The manufacturer's warranty will be void if this is not complied with. Please contact your C-Bus specialist for further details.

Care and Cleaning

S3000 Modena products are designed for durability and resistance to marking. Over time, however, normal usage can result in the build-up of dust and grime from finger marks etc.

Like most wall plate ranges in South Africa, the polycarbonate material that provides Modena with their strength and toughness can be susceptible to

physical degradation over time if subjected to certain chemical

compounds, including those that may be found in some common household cleaners.

S3000 Modena products should only be cleaned with a water dampened cloth in order to maintain their optimum appearance and longevity.

Assembly and Wiring

GENERAL INSTRUCTIONS

- It is illegal for persons other than those authorised by legislation to work on the fixed wiring of any electrical installation.
- All installations must be in accordance with local Electrical Wiring Regulations and Building Codes of Practice.
- CLEANING – To clean, simply use a cloth dampened with water only. Cleaning agents are not recommended as their use may harm the product and void warranty claims.

Fitting Instructions

1. Modular accessories can be wired before or after clipping into the frame.

2. Once the module is firmly clipped to the frame the cover can be clipped into place.

Cover Removal

To remove cover insert a flat blade screwdriver between cover and frame tab and gently lever apart.

Module Removal

To remove modules use ejector tool (40MET) as shown below.

Ejector tool must be pushed in straight down and not wiggled.

Installation & Operating Instructions for: S2020E, S2020E-CAP, ST2020E, ST2020EI, ST2020ECAP and ST2020EICAP

Introduction

The electronic thermostat is fully programmable, capable of switching on and adjusting your heating system at pre-determined times on different days of the week. You can set 4 periods called events, each day, with different temperatures for each event.

The thermostats are programmed with a default factory schedule (see point 4), suitable for most installations. Unless you change these settings, the thermostat will operate to this default program.

1. Getting started

Buttons

- A - Pin button to adjust clock
- B - On/off
- C - Reset to factory setting
- D - Adjustment down
- E - OK to Accept
- F - Adjustment up
- G - Display

Display Symbols

- H - Clock Function
- I - Manual mode
- J - Time and temperature
- K - Day number
- L - Heating on
- M - % Monitoring of switch-on time
- N - 4 event symbol

- ☀ Wake
- 🏠 Out / Away
- 🌙 Night
- 🏠 Home

1. Starting the operation of the thermostat

The first time power is connected, the clock and day indicators will be flashing, and must be set. If you need to adjust the time of the thermostat at a later date, insert a pen into the hole for setting of time and day. Adjustment must be made for summer and winter time where daylight saving is applicable.

2. Daily use of the thermostat

4-event clock mode

Each day has been split into 4 events describing a typical day. When the thermostat is in 4-event mode it will automatically adjust the temperature according to the programmed temperature and time. As standard, the thermostat has 5 days with 4 events (typically Monday to Friday), and 2 days with 2 events (Saturday and Sunday).

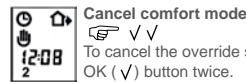

4-event clock mode:

The clock function symbol (⌚) and one of the 4 event symbols (☀, 🌙, 🏠, 🏠) will be indicated. For programming see Point 3.

Comfort mode:

Temporary override

To temporarily override the temperature in the 4-event schedule program, press the UP (Δ) and DOWN (∇) button once, to show the temperature, and press again to increase or decrease the temperature. The display will flash for 5 seconds, and will then revert to the time. The override will operate until the next programmed event when the unit will resume the automatic programme.

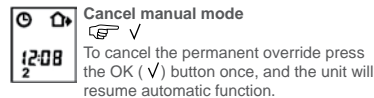

Cancel comfort mode

To cancel the override state, press the OK (✓) button twice.

Manual Mode:

Permanent override:

During holidays, the scheduled 4-event program can be overridden. Press the OK (✓) button, and then the UP (Δ) or DOWN (∇) button until the override temperature is set. The unit will now operate to this temperature permanently.

Cancel manual mode

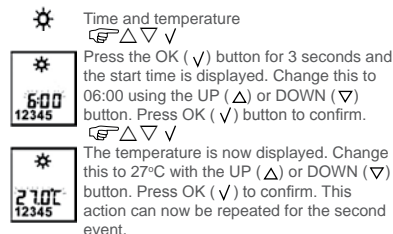

To cancel the permanent override press the OK (✓) button once, and the unit will resume automatic function.

3. Programming

4-event time and temperature

For each event, the start time and required temperature must be set.

For example, in the morning you wish the heating to start at 06:00 and the temperature to rise to 27°C.

You leave for work at 08:00 and wish the temperature to go down to 20°C while you are out.

You return from work at 16:00 and wish the temperature to go up to 27°C.

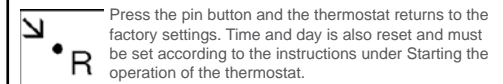

You go to bed at 22:30 and wish the temperature to go down to 20°C.

These setting will be valid for days 1 - 5 (Monday - Friday), showing on the display. To program days 6 and 7, repeat the above. Days 6 and 7 are usually Saturday and Sunday, and have two events.

The temperature can be set within the range of +5° to +40°C. It is also possible to select the heating OFF at an event by reducing the setting to 5°C, and then pressing the DOWN (∇) button once more.

4. Reset to Factory Settings

4-event time and temperature

Day 1-5	Time	Temperature	
		S2020E S2020ECAP ST2020E ST2020ECAP	ST2020EI, ST2020EICAP
	06:00	25°C	20°C
	08:00	20°C	15°C
	16:00	27°C	22°C
	22:30	20°C	15°C
Day 6-7			
	08:00	27°C	22°C
	23:00	20°C	15°C
Hi-Low Temp.		55°C/5°C	28°C/15°C
4-event sequence	5:2		
Scale	24 H /°C		
Adaptive Control	ON		

5. Failure Codes

- E0 = Internal failure, replace thermostat
- E1 = Built-in sensor short-circuit or disconnected, replace thermostat
- E2 = External sensor short-circuit or disconnected

Note: Refer to the full Instruction Manual supplied with the product for full detail.

S2000 Universal Tactile Dimmers

This new range of Dimmer Modules represents a revolution in dimming technology.

For the installer, they are ideal, as they are suitable for use with Leading and Trailing edge, Electronic or Wirewound Transformers. These Dimmer Modules also have built-in short circuit and overload protection.

For the end-user, the 'scene' programming facility transforms the dimmer into an automated mood-setting control unit. A simple press of the switch will set the lighting to pre-programmed levels, so there's no fiddling to get the right level.

Set the fade time between settings and for switch off, and you've got dimming that is convenient and easy to use.

Technical Information

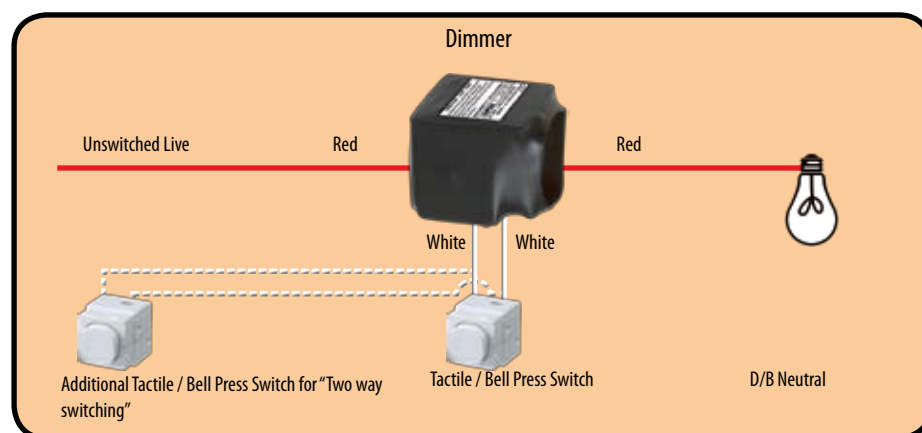

1. Load

500W (2.1 amp), 800W (3.3 amp) – 12V low voltage or 230V up to maximum rating of the unit.

Can be used with Clipsal's Scenemaster Fluorescent Interface (E2400AM) to dim 1-10VDC Fluorescent ballasts.

Contact your Clipsal rep for more information.

2. Wiring Instructions

3. Important

- Wiring must be done by a qualified electrician in compliance with the local code of practice.
- These dimmers are for internal use only.
- Three year carry-in distributor warranty.

4. Trailing vs Leading Edge

The Leading Edge dimmer unit can be activated to a Trailing Edge dimmer unit.

- Once the unit is installed, switch the main power supply off.
- Press the switch and hold down.
- Switch the power back on whilst still holding the switch down.
- Release the switch.
- All loads are Leading Edge, unless specified by supplier

5. Switch Operation

These dimmers are for use with a Tactile / Bell press switch.

- Press the switch once to turn all the lights on or off.
- Press and hold the switch to dim down to the required level.
- Release the switch at the desired level.
- Press the switch again to brighten all lights.
- Pre-Set Factory Settings
- Press switch 2 times to dim to 75%; 3 times for 50%; 4 times for 30% and 5 times for 10%.

S2000 Universal Tactile Dimmers

7. Programming Instructions

To open programming press the switch 10 times. All lights will dim.

a. Programming scenes

- Press the switch 2 times. You are now in 'Scene Setting One'. Dim or brighten the lights to the require level.
- Press the switch 3 times – this is 'Scene Setting Two'. Dim or brighten the lights to the required level.
- Press the switch 4 times for 'Scene Setting Three'. Dim or brighten the lights to the required level.
- Press the switch 5 times for 'Scene Setting Four'. Dim or brighten the lights to the required level.
- Close programming mode, or proceed to 6b. for inter-scene fade rate settings.
- To close programming, press the switch 10 times. All lights will brighten.

b. Programming Inter-Scene Fade Rates

This section of programming controls the rate of change between scenes.

- Open programming mode if it was closed after completing 6a.
- Press the switch 6 times.

Adjust light dimming on the master switch as follows:

- Minimum light level gives a 0.2 second Fade Rate.
- Maximum light level gives an 18 second Rate, i.e. for the 18 second Fade Rate brighten the lights to 100%
- Light levels between minimum and maximum will be pro-rata of the 18 seconds, for example 50% light = 9 seconds Fade Rate.
- Close programming as in 6a, or proceed to Off-Time Fade Rate Setting.

The system is now re-programmed and can be used as normal.

c. Off Time Fade Rate

This controls the rate at which the light switches off.

- Open programming mode if it is closed.
- Press the switch 7 times. Adjust light dimming on the Master Switch as follows:
- Minimum light level is a 1.5 second Off Rate.
- Maximum light intensity gives an 11 minute Off Rate.
- Light levels between Minimum and Maximum will be pro-rata of the 11 minute Off Fade Rate, for example 50% light level = 5 1/2 minute Off Fade Rate.
- Close programming mode

The system is now re-programmed and can be used as normal

How to use under floor heating

In order to gain the maximum possible benefits from your Clipsal Underfloor Heating System, we recommend the following:

- » Make sure the installation is done by a qualified electrician or installation technician. Clipsal offers free training courses on their Under floor Heating Systems - contact your nearest Clipsal branch for more information.
- » Switch on your system at the main switch approximately one week before the cold season starts. This allows the concrete base of the building to warm up gradually, so that by the time the cold sets in, your building is evenly heated.
- » Optimum comfort levels usually fall within the 18 - 22° C range, with 20° C considered ideal.
- » Windows and doors should be kept closed as much as possible in the first week of operation in order to allow all areas of the building to absorb as much heat as possible.

Under Carpet

Please note: These tables & quantities are an estimate only and can vary according to type of floor or tile used.

Formula to work out recommended wattage for the area

- Square metres of area x 80 (or nearest heater size) = Wattage needed for the area
- Consult table below to determine which heating mat or combination of heating mats are needed.

Square metres overall use	Heating Mat Size (m)	Watts	Amps	Ohm's
1 to 3	(0.6 x 1.7) or (1 x 1.5)	300	1.36	162
4 to 8	(1 x 2.5)	500	2.27	97
9 to 12	(2 x 2.4)	1000	4.54	48.5
13 to 18	(1 x 2.5) + (2 x 2.4)	1500	6.82	32
19 to 22	2 x (2 x 2.4)	2000	9.1	24
23 to 26	2 x (2 x 2.4) + 1 x (1 x 2.5)	2500	11.36	19
27 to 32	3 x (2 x 2.4)	3000	13.63	16

Under Tile

Formula to work out recommended wattage for the area - for both braided and un-braided cable.

- Square metres of area x 100 = Wattage needed for the area
- Spacing between runs: 50 - 75mm Apart; 100mm for wooden floors.

						Spaces between runs						
						0	1	2	3	4	5	6
						45mm	55mm	65mm	75mm	85mm	95mm	105mm

Pink or White	1 Bag Superscreed	1/2 Bottle Screed Binder
Violet or Tan	2 Bags Superscreed	1 Bottle Screed Binder

- Amount of Superscreed and Binder used is only an estimation as floor finishes (grain of cement) will determine absorption of cement.
- The amount of Polyester used will be determined by the gap cable is run at.
- Primer must be used for floated floors and tile finishes.

Under Floor

Formula to work out recommended wattage for the area

- $\pm 120 \text{ W/m}^2$ Depending on building design
- Spacing between runs: $\pm 100\text{mm}$

						Spaces between runs						
						Skip	0	1	2	3	4	5
							45mm	55mm	65mm	75mm	85mm	95mm
Square metre	Watts	Length	Colour	Amps	Ohm's	Square metre area						
1 to 3	300	25m	blue	1.4	160		**	1.3m ²	1.6m ²	1.8m ²	2.1m ²	2.3m ²
4 to 5	600	50m	orange	2.7	81.5		**	2.7m ²	3.2m ²	3.7m ²	4.2m ²	4.7m ²
6 to 8	900	78m	pink	4.1	53.6		**	4.3m ²	5m ²	5.8m ²	6.6m ²	7.4m ²
9 to 10	1200	90m	white	5.5	40		**	4.9m ²	5.8m ²	6.7m ²	7.6m ²	8.5m ²
11 to 13	1600	110m	violet	7.3	30		**	6m ²	7.1m ²	8.2m ²	9.3m ²	10.4m ²
14 to 17	2100	138m	tan	9.5	23		**	7.6m ²	8.9m ²	10.3m ²	11.7m ²	13.1m ²

Ceiling Exhaust Fan: CE 250

Fan Type - Axial			
Catalogue Number	CE250	Above cook top	1200mm
Cubic metres per hour	385m ³ /h	Fan dia.	250mm Ø
Litres per second	107 l/s	Number of speeds	1
Overall intake size dia. (A)	345mm Ø	Rated voltage	240V
Duct size dia. (B)	284mm Ø	Watts	40W
Room Protrusion (C)	19mm	Full load current	0.35A
External protrusion (D)	110mm	Motor type	Ball bearing
Plug and lead length	800mm	Decibel rating at 3 metres	44dBA
Hole size dia.	287mm Ø		
Minimum mounting height			

A Overall intake size	345mm	C External protrusion	19mm
B Duct size	284mm	D Internal protrusion	110mm
		Cubic metres/h	385
		Litres per second	107
		Hole size	295mm
		Fan Diameter	250mm
		Motor Type	Ball bearing

Recommended air changes per hour		
Application	Changes per hour	Recommended fan for normal size rooms
Kitchen	18	250mm
Laundry	18	250mm
Bathroom	18	200mm
En Suite Toilet	40	200mm
Living Room	5	200mm
Office	10	250mm 2 speed
Shop	10	250mm 2 speed
Depending on room conditions - more or less changes may be required. The above figures are approximates only.		

TECH INFO GUIDELINES

Sequence Options

RJ-45 MODULAR
JACK (FEMALE)

RJ-45 MODULAR
JACK (MALE)

Sequence is defined as the order in which the incoming pairs are terminated into the modular interface pins

EIA 568A

This is the preferred connection sequence for Australia and New Zealand as stated in AS/NZ 3080-1885; also the EIA Commercial Cabling Specification Draft 9.0 for termination of UTP data cable. The international standard for ISDN also states this standard. This is similar to the 568B sequence except that pairs #2 and #3 are transposed.

EIA 568B

This is the preferred connection sequence for the U.S. and is derived from ISO 11801 and is a sub-set of IEEE 802.3 10 Based-T Ethernet over twisted pair.

CATEGORY 5e

The characteristics of these twisted-pair cable and components are specified up to 100Mhz. They are intended to be used for voice and data transmission rates up to and greater than, 16Mb/s [eg. IEEE 802.5 16Mb/s twisted-pair standard and ANSI X3T9.5 100Mb/s twisted-pair physical media dependent (TP-PMD)].

CATEGORY 6

Continued development of high-speed applications drove the need for more bandwidth than Category 5 cabling systems. Category 6 channels have a power sum ACR that is greater than zero at 200 Mhz, and parameters are specified up to 250 Mhz.

Solid vs. Stranded Cable

UTP SOLID CABLE

For runs between Building Distributor or from the Floor Distributor to a wall plate, choose regular UTP cable. These solid-conductor cables, designed for horizontal and backbone cable runs, should not be flexed, bent or twisted repeatedly and should be installed in accordance with recommended installation guidelines

UTP STRANDED CABLE

Use stranded patch cable for connecting your workstations to the wall plate with patch panels and with other equipment such as hubs. Since it's made with stranded components, stranded patch cable is excellent for applications that call for repeated flexing without damaging the cable.

Since attenuation is higher in stranded cables than in solid-conductor cables you should try to keep these cables' runs short to lower the chance of introducing even more attenuation into your system. It's best to keep lengths of stranded patch cables under 6.0 meters.
